

Need to create SPA react application

The page should be similar to the below design

Page 1 - Design

Logo Home Services Gallery Contact Us

Model	Text	Location	Text
Color	Text	No of Owners	Text
Year of Manufacture	Text	Transmission	Text
Insurance Valid upto	Text	External Fitments	Text
Kms	Text	Photo	Browse btn
<div>SUBMIT</div>			

Action needed on this page

1. When we click on the any logo then the below form need to be shown. Till that it will be hidden.
2. Model Field should come from button clicked from the logo.
3. All will be as input box and the photo will be browse file. (no action needed)
4. **On submit:** Just print the JSON in the same page with all the details saved.
5. Try to create 3 to 4 records and try to update the same in JSON.

PAGE 2 -Using routes

Considering all the data which is created in the above screen will be used in this view page where we need to use filter and show the desired results.

At least have 10 results in page and use filter. Have 1 condition for each filter and display results based on the page.

Create JSON based on the filter condition.

Filters

Location:

Body Type

Hatchback

Sedan

SUV

Result Details

Brand

- ☐ Wagon R
- ☐ Celerio
- ☐ Swift
- ☐ Swift Dzire

Owners

- ☐ 1st Owner
- ☐ 2nd Owner
- ☐ 3rd Owner

Budget:

Less than 2 L

2 L - 4 L

4 L - 6 L

More than 6 L

Fuel Type

- ☐ Petrol
- ☐ Diesel
- ☐ CNG

Transmission:

- ☐ Automatic
- ☐ Manual

Note: design is not priority. you can use any css to do the design. NO need to have exact alignment at all. All need to be focused on react skills.

Conditions for test

1. use functional component for this complete project.
2. complete code should be in TSX
3. create a separate JSON file and get all the values from JSON only no hard coded value
4. Try to use as much hooks where ever needed
5. use redux toolkit for global state
6. Create at least 1 context API to share the data between component
